

## Finance Analysis Dashboard

---

A Performance analysis using Power BI to track company expenses, identify spending patterns, and compare income vs. expenses across accounts, companies, and time.

### Project Objective

---

- Track and analyze company expenses over time
- Identify key spending areas and patterns
- Compare income vs. expenses monthly
- Provide an interactive dashboard to explore financial performance by company, account, and date.

### Dataset

---

[https://github.com/Anish7000/Finance-Analysis-Dashboard/blob/6256a6e747b1b99f2550041ad25f1e38fd6d135b/Finance\\_Expenses.csv](https://github.com/Anish7000/Finance-Analysis-Dashboard/blob/6256a6e747b1b99f2550041ad25f1e38fd6d135b/Finance_Expenses.csv)

### Questions

---

- Which expense categories contribute the most to total spending
- Which days of the week see the most/ least spending
- How monthly income and expenses compare over time
- The overall difference between total income and total expenses
- Which account types account for the debit transactions
- How debit transactions are distributed across companies
- Which subcategories account for the highest spending

### Process

---

1. Imported and cleaned the data in Power Query
2. Built DAX measures (Total Income, Total Expenses, Net Cashflow) and calculated columns (Weekday, Month-Year)
3. Created visuals to explore spending by category, subcategory, weekday, month, account, and company
4. Made interactive by adding slicers to Company, Account, and Date

### Outcomes

---

- Income exceeded expenses every month, for a total net cash flow of \$64.4K in 2023
- Spending is evenly spread across categories, accounts, and companies
- Weekends see the highest spending of the week

### Reference

---

This project was built independently from the KPI questions and raw dataset published in Anish7000/[Finance-Analysis-Dashboard](https://github.com/Anish7000/Finance-Analysis-Dashboard), then compared against that project's dashboard.
